

Math 113 Definitions.

1. **Set.** A set is an unordered collection of elements.
2. **Map.** A map from X to Y is $f : X \rightarrow Y$ (a rule that assigns elements to Y to elements in X). So, for any $x \in X$ there exists a unique $y \in Y$ such that $f(x) = y$.
3. **Cartesian Product.** The Cartesian product of X and Y is the set $X \times Y = \{(x, y) \mid x \in X, y \in Y\}$.
4. **Equivalence Relation.** An equivalence relation R, \sim on X is a subset $R \subseteq X \times X$ such that
 - (a) Reflexive. $((x, x) \in R \text{ for all } x \in X)$.
 - (b) Symmetric. $(\text{if } (x, y) \in R, \text{ then } (y, x) \in R)$.
 - (c) Transitive. $(\text{if } (x, y) \in R \text{ and } (y, z) \in R, \text{ then } (x, z) \in R)$.
5. **Equivalence Class.** Let X be a set and R be an equivalence relation on X . Then, an equivalence class of $x \in X$ is the set $[x] = [x]_R = [x]_{\sim} = \{a \in X \mid x \sim a\}$.
6. $\mathbb{Z}/m\mathbb{Z}$. The set of distinct equivalence classes of $\equiv \pmod{n}$ is $\mathbb{Z}/m\mathbb{Z}$.
7. **Group.** A group G (denote: (G, \star)) is a set G with a closed binary operation $\star : G \times G \rightarrow G$ such that:
 - (a) Associativity: $(a \star b) \star c = a \star (b \star c)$ for all $a, b, c \in G$.
 - (b) Identity: There exists an $e \in G$ such that for any $a \in G$, we have $a \star e = e \star a = a$.
 - (c) Inverse: For any $a \in G$, there exists an $a^{-1} \in G$ such that $a \star a^{-1} = a^{-1} \star a = e$.
8. **Symmetric Group.** The symmetric group on n letters is S_n .
9. **Disjoint Cycles.** Two cycles (a_1, \dots, a_k) and (b_1, \dots, b_l) are disjoint if $a_i \neq b_j$ for all i, j .
10. **Transpositions.** The simplest permutation is a cycle of length 2, which is called a transposition.

11. **Even, Odd Permutations.** A permutation is even if it can be expressed as an even number of transpositions. A permutation is odd if it can be expressed as an odd number of transpositions.
12. **Subgroup.** A subgroup H of a group G is a subset H of G such that when the group operation of G is restricted to H , then H is a group.
13. **Trivial/Proper Subgroup.** The trivial subgroup of a group G is $\{e\}$ and a proper subgroup is a subgroup H of G where H is a proper subset of G .
14. **General/Special Linear Group.** $GL_2(\mathbb{R})$ is the set of 2x2 invertible matrices with real entries. $SL_2(\mathbb{R})$ is the set of 2x2 invertible matrices with real entries and with determinant 1.
